Cell RNA ^[1]

High quality total RNA from human and animal primary cells using the modified guanidium thiocyanate method. RNA is offered at 10 & 25 µg/vial at 1 mg/ml, and is ready for use in downstream applications like microarray hybridization, PCR cDNA synthesis and RT-PCR analysis.

Tissue RNA ^[2]

Total RNA prepared from normal **human tissues** using the modified guanidium thiocyanate method. RNA is DNase treated to remove contaminating genomic DNA and undergoes stringent quality control tests. Purified RNA is ready for use in convenient 50 & 250 µg sizes for various downstream applications, including microarray hybridization, PCR cDNA synthesis and RT-PCR analysis.
